

Led Projects strengthens its role in professional tennis as official technology partner of the Open Menorca ATP Challenger 100

The Spanish company doubles down on its commitment to tennis by sponsoring and lighting up the centre court at the only ATP tournament on clay in the Balearic Islands in 2026.

Menorca, 11 February 2026 - Led Projects and BioSport Menorca have renewed their partnership agreement ahead of the 2026 edition of the **Open Menorca ATP Challenger 100**, set to take place from 29 March to 5 April at the **Club Tenis Ciutadella**.

Once again, the Spanish firm will act as both sponsor and official lighting provider for the tournament's centre court, cementing its presence in professional tennis and expanding its involvement in top-tier competitions. This renewed collaboration reflects Led Projects' growing footprint in high-performance sport and brings their internationally recognised lighting expertise from padel to the world of tennis.

As part of the agreement, the centre court will benefit from a major upgrade: a brand-new lighting system featuring **32 custom-designed 300W LED floodlights**, tailored to fit the ongoing renovation of the venue. These state-of-the-art lights are equipped with asymmetric optics specifically developed by Led Projects for racket sports, ensuring **even light distribution**, no glare or shadows, and full compliance with **UNE-EN 12193** standards and ATP Challenger 100 technical requirements.

"Upgrading the centre court gave us the perfect opportunity to align with ATP standards, allowing us to host and broadcast matches at night with consistent lighting and full visual comfort for players, fans and broadcasters," said **Toni Capó, General Manager of BioSport Menorca**, the company behind the tournament.

"It's not just about lighting a court," added **Juan Antonio Pérez Gómez, CEO of Led Projects**. *"It's about bringing years of experience in professional padel to the world of tennis. Being part of the Open Menorca is a great opportunity to apply that expertise in an ATP setting that's highly committed to technical quality and excellence."*

This renewed partnership further establishes Led Projects as a key player in professional tennis, continuing a track record of involvement in elite-

level competitions and reinforcing its position as a leader in high-performance sports lighting.

About Led Projects

Led Projects (Led Light Projects S.L.), based in Leganés (Madrid), was founded in 2013 and specialises in custom lighting solutions for sports, healthcare and industrial facilities. With over **6,500 padel courts** illuminated worldwide, the company designs and develops all its products in Spain and holds **ETL (Intertek)** certification for the US market.
